RUBRIC: Virtual Machine Setup (Ubuntu Desktop)

Activity: Create, Configure, and Install Ubuntu Desktop on a Virtual Machine

Total Points: 100

Criteria	Excellent (100%)	Proficient (75%)	Developing (50%)	Incomplete (0%)	Score
VM Type & Version (10 pts)	Correctly selects Ubuntu (64-bit) as the OS type and version. Matches the downloaded ISO architecture.	Selects correct type but wrong version (e.g., 32-bit instead of 64-bit) — VM still works.	Selects wrong OS type entirely (e.g., "Other Linux") — needs correction.	Fails to select any valid OS type; cannot proceed.	/10
Memory (RAM) Allocation (15 pts)	Allocates 4-8GB RAM as required. Understands the host system limitation.	Allocates 3GB – 3.5GB (sufficient but slightly below requirement).	Allocates 2GB or less — causes severe lag or installation failure.	Allocates no RAM or invalid value.	/15

Processor (CPU) Allocation (15 pts)	Allocates 4 CPU cores with 100% execution cap . Enables PAE/NX if available.	Allocates 2 cores but does not adjust execution cap or nested VT x settings.	Allocates only 1 core — installation takes extremely long.	Fails to configure processor settings.	/15
Hard Drive (Storage) Setup (20 pts)	Allocates 100 GB dynamically allocated storage (or fixed). Created a partitioning in drive.	Allocates 25GB but chooses wrong disk format (e.g., VHD) — still functional.	Allocates less than 20GB — insufficient for installation.	No hard drive created; VM cannot boot.	/20
ISO Attachment & Boot Order (15 pts)	Correctly attaches the Ubuntu Desktop ISO to the optical drive. Sets boot	Attaches ISO but forgets to adjust boot order — manually boots	Attaches ISO but boot order wrong — VM boots to blank screen.	Fails to attach ISO; VM cannot install.	/15
	order: Optical → Hard Disk .	via "Force BIOS" first time.			
Proper Installation Execution (25 pts)	Completes full installation: partitioning ("Erase disk"), user setup, timezone, keyboard. No errors. Reboots successfully into GUI.	Completes installation but makes minor errors (e.g., wrong timezone — fixes later).	Installation starts but fails midway (partitioning error, corrupt ISO, or power loss).	Installation not attempted or aborted.	/25

TOTAL SCORE: ____ / 100

DOCUMENTATION REQUIREMENT

Student Name: Buza, Victor Dos Santos

Date: 09/02/2026

VM Name: victorvj

1. VM Specifications Summary

Component Allocated Value

VM Type / OS Ubuntu (64-bit)

RAM _____ GB (5000 MB) CPU Cores 4

Hard Drive Size 20GB (Dynamic / Fixed) Storage Controller SATA /

SCSI

Network Adapter NAT / Bridged

ISO File Used ubuntu-26.04-desktop-amd64

2. Step-by-Step Setup Process

(Describe what you did, in order. Include commands used, if

any.) 1. First i start with my machine and i press new, where by i give the name of my machine victorvj, i didn't touch my folder, but i change iso to ubuntu-26.04-desktop-amd64

2. Next was my username and password from my guest os install setup

3. After was my hardware, where by i use 5000MB on my base Memory and 4 CPU 4. On virtual hard disk i use 100 gb

5.

3. Issues Encountered & Resolutions

(List any problems during setup and how you fixed them.)

Issue	Solution
Find my ip a adress	Help from teacher(1 my network on server was on NAT he said to change to bridged adapter)

4. Verification Screenshots *(Paste screenshots here or attach separately)*

- VM Settings (Memory, CPU, Storage)
- ISO Attached / Boot Order
- Installation Progress
- Final Desktop with Terminal Open

FIRST STEP: Creating a Virtual machine Name and Operating System

This is where i start my work, where by i need to create something just mine

So i creat my and give the name victorvj.

And IOS i use ubuntu-26.04-desktop-amd64.iso

And i press next

Unattended Guest OS Install Setup

Here, is where you create your Username and Password after that just press Next

Here is on Hardware side where you have to choose your Base Memory where the recommendation is from 4GB to 8GB and i choose 5GB(5000)

And next is the Processors, in another word CPU where by i use 4

Virtual Hard disk

Here is where you Create a Virtual Hard Disk

And i put 100.00 GB as disk size

Here you need to creat an acc

This is the part where you just wait until it open

Here is the Final Desktop with Terminal Open
